Our company

ecovium is the path on which innovative software and hardware solutions for all areas of logistics, sound business intelligence and competent consulting meet.

The common goal:

Connected supply chain solutions with added value for everyone.

The logo for 'ecovium' is displayed in a large, metallic, 3D font. The letters are white with a blue gradient and a reflective surface. The logo is set against a dark blue background that appears to be a glass wall or window in a modern office environment. The reflection of the logo is visible on the surface below it.

The digitization and optimization of logistics supply chains are only successful with the corresponding IT support and smart data.

With many years of experience in development, consulting and project management, our team faces the logistical challenges of today, tomorrow and the day after tomorrow.

Our name

Our name, ecovium, serves as our compass and expresses our attitude.

It unites two essential aspects that are inseparable at our work: Economy and ecology.

As a company, we take responsibility for the world in which we live.

The world of logistics is evolving, and so do we. Instead of well-known paths, we take fresh approaches.

Economy  **Ecology**

economy

ecovium

ecology

vium:

Derived from the Latin word „via“
- way, journey, manner.

unite and create

ecovium

Our brand essence

Global networks, time pressure and a rapidly growing flow of goods pose challenge our ecosystem. Only through smart collaboration and digital processes we can create resilient supply chains that benefit everyone in this constantly changing world.

Experts from all areas of logistics IT work together on solutions and processes, united under one brand. The interaction enables savings and more efficiently used resources along the supply chain.

Through this approach, we empower our customers to develop a new awareness of the connections between the economy, the environment and society.

Our international portfolio

Mantis, the provider of warehouse management systems joined us at the beginning of 2022. With this merger, 120 experienced employees, proven IT solutions for companies with global business activities and a worldwide support team enrich our company.

With locations in nine countries and many qualified partners, Mantis' business activities cover more than 30 countries in Central and Eastern Europe, Israel, USA, and Canada, as well as in Latin America, the Middle East, North Africa and Asia-Pacific.

Mantis also adds the Logistics Vision Suite (LVS) to our solution portfolio, an innovative WMS solution that is particularly suitable for companies with demanding and automated warehouse and distribution operations.

The ecovium logo is centered within a large, light-colored circular graphic that has a partial cutout on the left side. The word "ecovium" is written in a lowercase, sans-serif font.

Your complete supply chain management from a single source.

Our work is focused on sustainable, connected logistics along the entire supply chain.

With joint expertise and innovative strength, we advance the digital transformation. Smart digital processes and data management solutions allow our customers to keep the complexity of their business processes under control and to operate flexibly on the market.

**Supply chain management can be this simple.
We call it: ecovium SimpleChain®.**

Our solutions

Software • Hardware • Consulting

Warehouse, shipping, customs, or transport - we advise you on the best IT solutions for your needs at any stage of the logistics value chain.

Our applications are complemented by cross-divisional business intelligence and the hardware to go with it. From development to implementation and beyond, we ensure that the individual solutions work perfectly together and integrate seamlessly into your existing system landscape.

Our connected solutions give you a greater individual scope of action and the certainty of deciding correctly. The result is an efficient supply chain at your fingertips, helping you reduce emissions and save valuable resources.

Customs clearance and foreign trade (Z-ATLAS)

- ATLAS Export
- ATLAS Import
- Bonded warehouse
- Inward Processing
- Outward Processing
- Confirmation of arrival
- Intrastat

Compliance and risk management (S-CHECK)

- Sanctions list check
- Export control
- Product classification
- Tariff classification
- Electronic Customs Tariff ECT

Origin of goods and preferences (P-CALC)

- Preferential calculation
- Management of supplier declarations
- Portal for preferential rules of origin: Automated collection of supplier declarations

SAP Add-ons

- Sanctions list check
- Export control
- Preferential calculation
- Import
- Export
- Tariff classification

Customs

The regulations concerning customs and foreign trade are constantly changing. Keeping an eye on the cross-border movement of goods is a major challenge.

We safeguard your global trade with expertise and matching solutions. Our modular Customs Suite simplifies logistics processes and minimizes risks.

Whether on-premises or in the cloud, our solutions always fit your individual requirements.

SAP users benefit from our SAP add-ons, which directly integrate the entire customs processing in the SAP system.

Warehouse management software

- Standardized interfaces to suppliers and ERP-/subsystems
- Optimized ordering processes and inventory through better overview
- Any information you need in one solution
- Digitization of your paper management
- Multi-client capability
- Connection of automatic warehouse systems
- Precise picking methods
- Inventory support

Automated inventory management

- Optimized inventories result in higher liquidity
- Reduced warehousing costs
- Highly flexible, simplified scheduling
- Increased delivery flexibility and robust processes
- Additional approaches for overall supply chain optimization

Forwarder-Suite

- WHM extension especially for 3PL and fulfillment companies
- Cloud-based self-service portal for business partners and customers
- Individually configurable data access
- Secure data storage in the ecovium cloud
- Time and cost savings through more efficient use of working time

Warehouse

To ensure a well-balanced relationship between inventory and goods availability, several important prerequisites must be met. These include transparent inventories, optimized routes, and automated processes such as scheduling, transfer order creation, or shipment notification.

With our scalable warehouse management solutions, you get the most out of your inventory. Our intralogistics experts will advise you on the application areas of our software and how to achieve optimization of your warehouse.

Software for multicarrier shipping (V-LOG)

- Freely scalable from ten to 150,000 shipments per day
- Automatic address correction
- Large carrier selection
- Freight cost management module
- Labeling

Automated shipment tracking (SHIPTRACK)

- Monitoring and reporting of carrier performance
- Proof of delivery
- Multicarrier tracking
- Connection via various interfaces
- Returns management

Shipping and returns management for e-commerce (E-Commerce Suite)

- Status of shipping orders can be viewed at any time
- Customer app for shipment tracking
- Returns management
- Labeling
- Freely scalable
- Hosting in the cloud (SaaS)
- Address validation
- Sanctions list check

Shipping

Customers' expectations regarding speed and convenience in shipping are constantly increasing. You need to select the right carrier, swiftly create all the necessary documents, and keep track of the goods until they are successfully delivered.

Without digital support, this is a time-consuming and costly undertaking.

Get your goods to their destination more easily: with our multicarrier shipping software, seamless track & trace for you and your customers, convenient returns management and transparent freight costs.

Thanks to our collaboration with leading system houses, you can integrate our solutions into your system as a perfect fit.

Software for transport and forwarding management on-premises

- Cost savings through optimal route planning
- Uncompromising adherence to schedules and delivery dates
- Interaction of all logistics processes along the supply chain
- Simple data handling and graphical scheduling
- Greater flexibility in competition

Software for transport and forwarding management in the cloud (TRANSROAD)

- Scalable from a single user to several hundred users
- Comprehensive update and data protection concept
- Flexible customization through powerful workflow engine
- Individually configurable and graphical user interface
- Easy handling without prior technical knowledge
- Comprehensive all-in-one package for forwarders and shippers

Add-ons, apps and interfaces

- Mobile add-on for shipment and route tracking
- Telematics app
- Interfaces to telematics systems, ERP systems and freight exchanges

Transport

In transport management, speed, transparency, and flexibility are key. From order entry and dispatching, route planning and fleet connection to the billing of freight costs. It is a complex task to control all these processes and to utilize the vehicle fleet optimally.

With our transport management software, you have your logistics firmly under control, on-premises or in the cloud.

The integration of your ERP system and interfaces to the telematics system ensure your success.

With our solutions, you have a solid information base for planning, managing, and controlling your transports in real time. Your customers can also be easily connected to the system.

Business Intelligence

- Data-driven increase in efficiency for the entire value chain
- Easy and fast integration
- Customizable „out of the box“ solution
- Holistic understanding of operational processes
- Intuitive data analysis without IT knowledge

Business Intelligence

Your company generates large amounts of data every day: in finance, sales, production and logistics, as well as with external partners. Important information is contained in this flood of data, which you can use to optimize your operating processes. The challenge for companies is to efficiently process and interpret the extensive data from many sources.

Our cross-divisional business intelligence software consolidates all the data and carries out an analysis of the most important processes in your company. All key figures and reports are instantly available on one dashboard. We provide predefined BI templates as reference models for all logistics solutions.

The software is up and running in your company after an implementation time of just ten working days.

Hardware

- Barcode scanner
- Mobile and industrial computers
- RFID solutions
- Label printers with supplies
- Mobile workstations on trolleys

Hardware suite

- Central management platform for mobile computers, label printers, barcode scanners and other hardware
- Service portal with repair registration and status display
- Overview of all hardware with in-depth information
- Automatic and manual hardware re-ordering
- Lifecycle management of all hardware
- Comprehensive label printer management with automated label re-ordering

Infrastructure solutions

- Mobile device management / device management software
- WLAN installations and radio measurements
- Workforce communication software
- Warehouse labeling

Services

- Suitable service concepts for every need (base service, full service, fully managed service)
- Various financing options: Device-as-a-Service (hardware subscription), leasing or financing
- Customer-specific configurations by experienced IT technicians
- Repairs / Authorized service partner of well-known manufacturers
- Workshops

Hardware

Even the best software solutions need adequate hardware and infrastructure so that processes can run reliably and efficiently. It is not an easy task to find components that are optimally aligned and that can be integrated into existing systems.

As a full-service partner with decades of experience, we know just what fits your business, from compact entry-level models for simple applications to multifunctional high-end devices for the harshest environments.

We provide support in selecting, integrating and operating the right hardware solutions and, as an independent full-service provider, help you build a reliable infrastructure.

Consulting

- Identification of industry trends (workshops)
- All company operations in view through business intelligence strategy
- Detailed evaluation of costs and benefits before introducing new solutions
- Analysis and optimization of business processes
- Change management and training by experienced logistics IT experts
- Optimized IT solutions are implemented in the company

Consulting

On the way to digitizing their logistics, many companies lack the necessary information and resources to properly assess technologies and solutions and to implement them along the value chain.

Our consultants work with you to identify the optimization potential in your company and walk you through the entire process, from the initial phase to the roll-out.

Benefit from fresh inputs and unexpected perspectives for your entire supply chain.
